***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-14, drawn to a flexible marking catheter for placement in a selected position in a body using a frameless stereotaxy system, classified in class 606, subclass 130.
  - II. Claims 15-33, drawn to a method of using a flexible marking catheter for placement in a selected position in a body using a frameless stereotaxy system, classified in class 600, subclass 417.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, the product as claimed can be used in a materially different process of using that product. For example, instead of being mounted on a frameless stereotaxy system probe, the flexible marking catheter could be used by itself to measure the depth of an organ.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

4. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
